Volume 5, Issue Nos. 1–4
International Journal for

NUMERICAL METHODS IN ENGINEERING

Issue No. 1, SEPTEMBER–OCTOBER 1972

G. E. Weeks: A Finite Element Model for Shells based on the Discrete Kirchhoff Hypothesis . . 3

A. H. Craven and R. Holmes: The Vibration of Engine Crankshafts—a Fast Numerical Solution . 17

G. R. Tomlin: An Optimal Successive Overrelaxation Technique for Solving Second Order Finite Difference Equations for Triangular Meshes 25

R. W. Lewis and R. W. Garner: A Finite Element Solution of Coupled Electrokinetic and Hydrodynamic Flow in Porous Media 41

H. S. Y. Chan: The Collapse Load of Reinforced Concrete Plates 57

B. M. Fraeijs de Veubeke and M. A. Hogge: Dual Analysis for Heat Conduction Problems by Finite Elements 65

A. K. Gupta and B. Mohraz: A Method of Computing Numerically Integrated Stiffness Matrices . 83

R. W. Porter and J. F. Coakley: Use of Characteristics for Boundaries in Time Dependent Finite Difference Analysis of Multidimensional Gas Dynamics 91

R. T. Cheng: Numerical Investigation of Lake Circulation Around Islands by the Finite Element Method 103

G. C. Nayak and O. C. Zienkiewicz: Elasto–Plastic Stress Analysis. A Generalization for Various Constitutive Relations Including Strain Softening 113

G. L. Rigby and G. M. McNeice: Further Limitations on General Hexahedron Finite Elements with Derivative Degrees of Freedom 137

SHORT COMMUNICATIONS

R. D. Cook: More on Reduced Integration and Isoparametric Elements 141

L. D. Hofmeister and D. A. Evensen: Vibration Problems using Isoparametric Shell Elements . 142

M. D. Gangal: Direct Finite Element Analysis of Elastic Contact Problems 145

Book Reviews 147

F. Walkden and P. Caine: Application of a Pseudo-Viscous Method to the Calculation of the Steady Supersonic Flow Past a Waisted Body 151

K. S. R. K. Prasad, A. V. Krishna Murty and A. K. Rao: A Finite Element Analogue of the Modified Rayleigh–Ritz Method for Vibration Problems 163

E. J. Haug, Jr., K. C. Pan and T. D. Streeter: A Computational Method for Optimal Structural Design. I. Piecewise Uniform Structures 171

J. M. Davies: A New Formulation of the Plastic Design Problem for Plane Frames 185

Y. Yamada, S. Nakagiri and K. Takatsuka: Elastic-Plastic Analysis of Saint-Venant Torsion Problem by a Hybrid Stress Model 193

J. S. Przemieniecki: Matrix Analysis of Local Instability in Plates, Stiffened Panels and Columns . . 209

C. A. Felippa: An Alphanumeric Finite Element Mesh Plotter 217

G. Venkateswara Rao, A. V. Krishna Murty and A. Kameswara Rao: Bounds for Eigenvalues in some Vibration and Stability Problems 237

R. E. Nickell and G. A. Secor: Convergence of Consistently Derived Timoshenko Beam Finite Elements 243

G. G. Boyne: The Optimum Design of Fluid Distribution Networks with Particular Reference to Low Pressure Gas Distribution Networks 253

J. T. Holden: On the Finite Deflection of Thin Viscoelastic Beams 271

R. D. Cook: Two Hybrid Elements for Analysis of Thick, Thin and Sandwich Plates 277

A. T. Chang: An Improved Finite Difference Method for Plate Vibration 289

J. Alan George: On the Density of Finite Element Matrices 297

Issue No. 3, JANUARY–FEBRUARY 1973

M. A. Muspratt: Stochastic Shakedown Analysis of Concrete Slabs 303

E. Faccioli and E. Vitiello: A Finite Element, Linear Programming Method for the Limit Analysis of Thin Plates 311

D. T. Phillips and C. S. Beightler: Computational Procedures for the Maximum Likelihood Parameters of the Gamma and Beta Distributions 327

K. M. Romstad, J. R. Hutchinson and K. H. Runge: Design Parameter Variation and Structural Response 337

R. G. Vos and W. P. Vaun: A Finite Element Tensor Approach to Plate Buckling and Postbuckling 351

M. Zlamel: The Finite Element Method in Domains with Curved Boundaries 367

B. A. Szabo and Chung-Ta Tsai: The Quadratic Programming Approach to the Finite Element Method 375

F. W. Williams: Comparison between Sparse Stiffness Matrix and Sub-Structure Methods . . . 383

K. K. Gupta: Free Vibration Analysis of Spinning Structural Systems 395

J. Ghaboussi and E. L. Wilson: Flow of Compressible Fluid in Porous Elastic Media 419

SHORT COMMUNICATIONS

J. G. A. Croll: The Treatment of Natural Boundary Conditions in the Finite Element and Finite Difference Methods 443

R. K. Livesley: A Compact Fortran Sequence for Limit Analysis 446

S. G. Newton: An Iterative Procedure for the Oscillatory Laminar Boundary Lazer 449

Issue No. 4, MARCH–APRIL 1973

T. Moan: Finite Element Stress Field Solution of the Problem of Saint Venant Torsion 455

G. A. Greenbaum, L. D. Hofmeister and D. A. Evensen: Pure Moment Loading of Axisymmetric Finite Element Modules 459

P. A. Engel: Rolling and Impact on a Linearly Viscoelastic Slab 465

P. Silvester and A. Konrad: Axisymmetric Triangular Finite Elements for the Scalar Helmholtz Equation 481

R. L. Taylor: Inversion of Prony Series Characterization for Viscoelastic Stress Analysis 499

K. T. Kavanagh: Experiment versus Analysis: Computational Techniques for the Description of Static Material Response 503

T. Y. Edwards and B. Kaplan: Numerical Solution of Mixed Boundary Value Problems using Numerical Green's Functions 517

B. Tabarrok and D. S. Sodhi: On the Generalization of Stress Function Procedure for Dynamic Analysis of Plates 523

P. G. Bergan and R. W. Clough: Large Deflection Analysis of Plates and Shallow Shells using the Finite Element Method 543

L. Shafai: Convergence of the Solution for the Far Scattered Field of a Conducting Cylinder of Arbitrary Cross-section 557

S. Singh and S. C. Gupta: Realization of Two-dimensional State Space Digital Filters 565

N. P. Dario and W. A. Bradley: A Comparison of First and Second Order Axially Symmetric Finite Elements 573

SHORT COMMUNICATIONS

F. X. Hurley and R. K. Linback: A Self-adjusting Grid for Finite-Difference Programs . . . 585

B. M. Irons and A. Razzaque: A Further Modification to Ahmad's Shell Element 588

M. Simaan: On the Inverse of Matrices with Nearly Equal Elements 589

Book Reviews 591

Table of Contents, Volume 5 595

Author Index 599

INTERNATIONAL JOURNAL FOR NUMERICAL METHODS IN ENGINEERING, VOL. 5, 599–600 (1973)

AUTHOR INDEX, VOLUME 5

Beightler, C. S.: see Phillips, D. T., 327,
Bergan, P. G., and Clough, R. W.: Large deflection analysis of plates and shallow shells using the finite element method, 543
Boyne, G. G.: The optimum design of fluid distribution networks with particular reference to low pressure gas distribution networks, 253
Bradley, W. A.: see Dario, N. P., 573

Caine, P.: see Walkden, F., 151
Chan, H. S. Y.: The collapse load of reinforced concrete plates, 57
Chang, A. T.: An improved finite difference method for plate vibration, 289
Cheng, R. T.: Numerical investigation of lake circulation around islands by the finite element method, 103
Chung-Ta Tsai: see Szabo, B. A., 375
Clough, R. W.: see Bergan, P. G., 543
Coakley, J. F.: see Porter, R. W., 91
Cook, R. D.: More on reduced integration and isoparametric elements, 141
——: Two hybrid elements for analysis of thick, thin and sandwich plates, 277
Craven, A. H., and Holmes, R.: The vibration of engine crankshafts—a fast numerical solution, 17
Croll, J. G. A.: The treatment of natural boundary conditions in the finite element and finite difference methods, 443

Dario, N. P., and Bradley, W. A.: A comparison of first and second order axially symmetric finite elements, 573
Davies, J. M.: A new formulation of the plastic design problem for plane frames, 185

Edwards, T. Y., and Kaplan, B.: Numerical solution of mixed boundary value problems using numerical Green's functions, 517
Engel, P. A.: Rolling and impact on a linearly viscoelastic slab, 465
Evensen, D. A.: see Hofmeister, L. D., 142
——: see Greenbaum, G. A., 459

Faccioli, E., and Vitiello, E.: A finite element, linear programming method for the limit analysis of thin plates, 311
Felippa, C. A.: An alpha/numeric finite element mesh plotter, 217
Fraeijs de Veubeke, B. M., and Hogge, M. A.: Dual analysis for heat conduction problems by finite elements, 65

Gangal, M. D.: Direct finite element analysis of elastic contact problems, 145
Garner, R. W.: see Lewis, R. W., 41
George, J. A.: On the density of finite element matrices, 297
Ghaboussi, J., and Wilson, E. L.: Flow of compressible fluid in porous elastic media, 419
Greenbaum, G. A., Hofmeister, L. D., and Evensen, D. A.: Pure moment loading of axisymmetric finite element modules, 459
Gupta, A. K., and Mohraz, B.: A method of computing numerically integrated stiffness matrices, 83
Gupta, K. K.: Free vibration analysis of spinning structural systems, 395
Gupta, S. C.: see Singh, S., 565

Haug, Jr., E. J., Pan, K. C., and Streeter, T. D.: A computational method for optimal structural design. I. Piecewise uniform structures, 171
Hofmeister, L. D., and Evensen, D. A.: Vibration problems using isoparametric shell elements, 142
——: see Greenbaum, G. A., 459
Hogge, M. A.: see Fraeijs de Veubeke, B. M., 65
Holden, J. T.: On the finite deflection of thin viscoelastic beams, 271
Holmes, R.: see Craven, A. H., 17
Hurley, F. X., and Linback, R. K.: A self-adjusting grid for finite-difference programs, 585
Hutchinson, J. R.: see Romstad, K. M., 337

Irons, B. M., and Razzaque, A.: A further modification to Ahmad's shell element, 588

Kameswara Rao, A.: see Prasad, K. S. R. K., 163
——: see Venkateswara Rao, G., 237
Kaplan, B.: see Edwards, T. Y., 517
Kavanagh, K. T.: Experiment versus analysis: computational techniques for the description of static material response, 503
Konrad, A.: see Silvester, P., 481
Krishna Murty, A. V.: see Prasad, K. S. R. K., 163
——: see Venkateswara Rao, G., 237

Lewis, R. W., and Garner, R. W.: A finite element solution of coupled electrokinetic and hydrodynamic flow in porous media, 41
Linback, R. K.: see Hurley, F. X., 585
Livesley, R. K.: A compact fortran sequence for limit analysis, 446

McNiece, G. M.: see Rigby, G. L., 137
Moan, T.: Finite element stress field solution of the problem of Saint Venant torsion, 455
Mohraz, B.: see Gupta, A. K., 83
Muspratt, M. A.: Stochastic shakedown analysis of concrete slabs, 303

Nakagiri, S.: see Yamada, Y., 193
